

Romatech® Chain Drive Roman Shades

using the Romatech™ Chain Drive Roman Shade System to make versatile and reliable Roman Shades.

The Romatech™ Chain Drive Roman Shade System is ideally suited for use with any typical sunscreening or blackout roller shade fabric. It can also be used with many drapery fabrics to make flat, pleated, and hobbled style Roman Shades.

Romatech® Chain Drive Roman Shades are identical to Romasafe™ Cordless Roman Shades except that they have a bead chain lift system instead of a spring loaded or motorized lift system. A side-mounted bead chain loop is used to operate the shade. Bead chain loops need to be installed with a tension device.

Romatech® Chain Drive Shades use sleek, miniature pleat battens, band guides, and clear polyester bands to lift the shades into neat folds.

The lift bands wind up onto a bead chain lift system tucked inside an elegant, covered cassette.

Romatech Chain Drive Shades offer:

- *Unlimited choice of pleat spacing.
- *Pleats without pinpricks of light.
- *Sizes to fit large windows.

The patent-pending band guides are made from clear virgin polycarbonate and self-align in the back channels of the pleat battens.

The patent-pending cassette positions the shade close to the window while allowing the lift bands efficient, non-binding access to the lift mechanism. The shade fabric wraps around to cover the front of the cassette.

Universal spring-clip brackets allow easy, snap-on installation.
