the romatech revolution is here...
so simple, so efficient, so attractive.

The revolutionary **Romatech System** enables any workroom, no matter how large or small, to introduce a quality Roman Blind range with an extremely low start up cost.

With the use of the Patented **Romatech Applicator** and **Aluminium Profile**, the usual issues related to No Sew Systems such as fabric snagging, lining tearing or misalignment of the batten are all but eliminated. Add to this the **Romatech Twist Rings** and **Form Fitting End Caps** and any unskilled assembler can produce the highest quality Roman Blind in as little as 15 minutes.

In summary, The **Romatech System** has been specifically designed to:

- Eliminate Stitch holes
- Eliminate fabric snagging
- Eliminate the need for skilled labour
- Minimize manufacturing times
- Increase your bottom line

custom soft
roman blinds...

With the use of the **Romatech Custom Roman Insert**, you are able to increase your manufacturing of Roman Blinds to now include almost any furnishing or drapery fabric available on the market today and all while still using the same simple Romatech System.

At last, a system so versatile that you can manufacture a vast array of blinds and finishes without having to take on the burden of a huge inventory.
