DOGECOIN BEST PRACTICES & MINING GUIDELINES

DIGITALATTO

1.Always Keep Your Wallet Connected to Mining Account

It is crucial to have your DOGECOIN wallet connected to one of your mining devices at all times to get mining rewards. This device should be powered on with a stable internet connection with computing power for mining rewards.

Please do not allow your device to hibernate or turn off, as this may result in missing rewards. In case you want to switch off or not use your system for mining for a while, then please log out from your doge.digitalatto.io account.

DIGITALATTO

2.Maintain continuous 24/7 mining operations.

This means ensuring that your mining operation runs without interruption around the clock, without any breaks or downtime.

3.Must have a device completely dedicated for mining

This involves having a specific device, such as a computer/PC/Laptop solely designated for the purpose of cryptocurrency mining, without using it for other tasks.

4.Ensure a stable internet connection:

This entails having a reliable and consistent internet connection to ensure uninterrupted communication with the mining pool and network, minimizing the risk of disruptions to mining activities.

5.Ensure a stable power supply.

This involves having a reliable and uninterrupted power source to keep your mining devices running smoothly without any unexpected shutdowns or interruptions.

6.Keep your devices operational throughout the mining process:

This means ensuring that all mining device and browsers remain active and operational from the start to the end of the mining process, without any pauses or breaks.

7.Avoid closing any mining windows while in operation:

This involves refraining from closing or terminating any mining software or applications running on your device during the mining process to maintain continuous operation and maximize mining efficiency.

8.Multiple Accounts Same Device- Follow the guidelines:

If you are mining with multiple accounts in one device, follow below method:

1 Browser maximum 2 accounts

Eg: 1 Chrome & 1 Incognito

If you are mining for free follow 1 account per device

9.Avoid Sleep/ Hibernate/ Hybrid Sleep Mode:

It's best to avoid these modes while mining, as they can interrupt the mining process and reduce efficiency. Mining typically requires continuous operation to maximize returns, and these low-power modes can negatively impact mining performance.

10.Power Management Settings & Uninterrupted Internet Connectivity:

To optimize mining performance, you may want to adjust your computer's power management settings. For example, you can set your computer to "High Performance" mode to prioritize mining efficiency. Make sure your computer doesn't automatically enter Sleep or Hibernate mode after a period of inactivity.

11.Free Miners

If you are a free miner, your trial will end on the 14th day, and you must deposit a minimum of 200 Dogecoins to avoid your account suspension.

Important Notice:

Your rewards will depend on how much you contributed when you withdraw.
Kindly note: We regret to inform you that we cannot offer further assistance if you are not adhering to the basic mining guidelines.

Violating this rule may result in penalties or account suspension, so it's essential for users to adhere to the platform's guidelines and only operate within the specified terms of service.

Avoid these :

1. Sleep Mode
2. Hibernate Mode
3. Hybrid Sleep
4. Shut Down
5. Restart
6. Lock screen
7. Disconnection of the internet
8. Logout from the mining account

DOGECOIN DEPOSIT GUIDELINES:

TO INCREASE YOUR MINING SPEED (DHS), YOU MAY DEPOSIT DOGECOINS

- Note: If your deposit is less than 200 Dogecoins, it will not be added to your mining account, potentially resulting in a loss.

- Therefore, we highly recommend depositing between approximately 203 to 205 Dogecoins, including gas fees, to ensure successful addition to your account and avoid any potential losses.

IF YOU DON'T HAVE DOGECOINS TO INCREASE DHS, YOU MAY BUY FROM OUR WEBSITE
