

You can choose between 2 modes of delivery when enrolling, thanks to our **Flexible Learning** which offers a variety of different learning opportunities to suit your needs, commitments, lifestyle and learning style.

Distance learning, giving you the flexibility to fit your study around your personal and work commitments, perfect for a busy lifestyle or when learning on campus is not an option, yet you still want the real-time experience. Study and learn through live online lectures, live webinars, as well as guided independent study delivered via our learning platform. You'll also have access to all the services including the library, student support services and IT.

A hybrid mix of distance learning where you can study and learn through live online lectures, webinars and resources to enhance and facilitate study, as well as a period attended in person in the UK** combining the best of both worlds and the flexibility of distance learning to achieve a study/life balance.

^{**} Subject to visa status and requirements.

Our virtual learning platform will be a fundamental part of your studies.

From learning material to virtual classes to attend you will find everything you need to learn.

Follow live lessons, interact with peers and professors, and submit coursework all in one place.

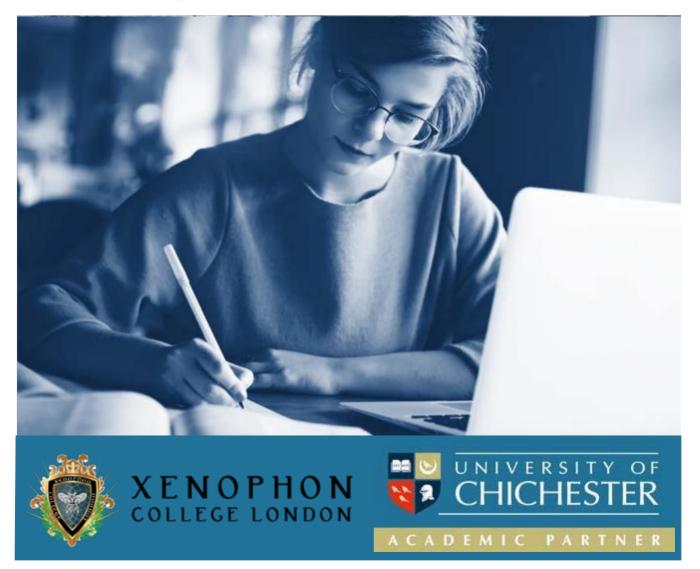

Available at your fingertips, whenever you want, wherever you are.

We partnered with Kaltura (leading Education Video Platform) to provide accessible content for all, including captions, screen reader support and accessible controls which enhance engagement and overall the learning experience for those with learning disabilities.

BA(Hons)

Psychology

XCL provides an interactive, innovative learning experience that promotes the acquisition of in-depth knowledge of core subjects in Psychology.

Students will have the opportunity to be part of a wider global academic and professional community. The experiential learning activities and the critical thinking approach of our teaching will equip students with the academic and practical skills required in competitive jobs.

At the School of Psychology, courses are delivered to both in-person students and distant learners.

By means of seminars, traditional lectures, labs, workshops and team challenges, students are encouraged to deepen their knowledge in a way that matters while and once they graduate.

At the same time, by fostering a practical approach, students have the chance to build interpersonal, transferable skills throughout the programme.

✓ The assessment strategy includes individual and group projects and presentations, essays and literature reviews

ACADEMIC WRITING

Students will be exposed to academic writing rules and techniques, including effective and extensive reading strategies, effective participation in seminars and delivery of presentations, and effectively listening to and recording information from lectures.

ENGLISH LANGUAGE SKILLS

Learning how to master a language is no easy task. During this course, students will have the opportunity to understand the rules of the English language and apply them to a variety of contexts and situations, including academically.

DIGITAL SKILLS

Through this course, students will be exposed to critical digital skills needed for their academic courses, ranging from online safety to how to communicate through digital means.

ANALYTICAL AND PROFESSIONAL SKILLS

This module aims to develop conceptual and practical skills to enhance students' ability to study, research, and gain employment in the field of Psychology.

HISTORICAL PERSPECTIVES IN PSYCHOLOGY

This module is an introduction to the world of psychology in order to understand the scientific underpinnings of psychology as a discipline, its historical origins, development, and limitations. The module will orientate the students towards some of the key concepts and debates, and it will briefly touch on all the other modules in order to provide a comprehensive introduction to the programme.

INTRODUCTION TO PSYCHOBIOLOGY

This module is a fundamental core module of the course. It is designed to be an introduction to principles in Psychobiology and it aims to develop knowledge and understanding of the role of the brain and nervous system in psychological processes including language, memory, emotion, stress, psychopathology, and sensory processes.

INTRODUCTION TO RESEARCH METHODS

This course introduces basic statistical tests and common research designs employed in psychological experimentation. There is particular emphasis on the execution and reporting of experiments, understanding, and interpreting the output of descriptive and inferential statistical tests, and how to use statistical computer software packages such as SPSS or R.
