

SIEMENS

A new view on building protection

Cerberus DMS makes building protection smarter, easier and more flexible.

www.usa.siemens.com/cerberus-dms

As an easy-to-use system with a single point of control, Cerberus DMS delivers a simpler way to manage your vital life safety systems.

Managing your fire system doesn't have to be complicated. Cerberus® DMS is a flexible and customizable danger management station that gives you the power to respond to life safety events faster and with more

information than other platforms. Built on leading Siemens technology, it addresses your immediate system needs while accommodating future expansion. It's easy to configure. It's easy to learn. It's easy to use.

UL 864 Compliant Fire System

- 1 Cerberus DMS UL864 Server
- 2 Cerberus DMS UL864 Client
- 3 UL864 Fiber Switches
- 4 Cerberus PRO Fire Safety Systems
- 5 XNET System
- 6 Real-time Cameras

Answers for infrastructure.

1. Summary Bar shows unacknowledged and total events currently in the system by category, with Life Safety events at the top
2. System Manager displays all devices and applications in the system, and finds devices in alarm
3. Primary Pane shows additional information about a selected point – e.g. graphical location of fire detector in alarm
4. Secondary Pane shows additional information about an event – e.g. a real-time camera view of an event
5. Related Links can access more information about a device, event or application, including special procedures or data
6. Text Pane provides data about a selected device, including current state

Next generation danger management

Cerberus DMS combines intelligent control with ease of use. It can integrate video cameras with the most advanced systems for fire protection, providing real-time views of critical events at the user interface. Cerberus DMS supports Siemens key fire system technologies, including Cerberus PRO, FireFinder® XLS and MXL®.

A truly flexible and customizable solution

With the flexibility to accommodate a variety of privilege levels and user work styles in a single computer, Cerberus DMS frees up valuable resources. Based on a user's profile, it can provide a very basic view or more expanded capabilities for analysis, investigation and reporting.

Cerberus DMS also helps to ensure the continuity of your business operations. It can be configured to send text messages, emails, or pages when critical events occur, providing stakeholders with the information that they need to initiate a fast response. Cerberus DMS also supports remote access via web interface. From a remote PC you can have the same view of the User Interface as the person operating the system.

Cerberus DMS is backed by Siemens – a global powerhouse in fire and life safety technology – so you can be confident in your investment. A local Siemens partner is readily available to offer support when you need it.

Highlights

- Customizable system views allow for faster, more informed response
- Enhanced vectoring and graphic capabilities make it easier to understand nature of events
- Designed for networked Siemens fire systems such as Cerberus PRO, FireFinder XLS and MXL
- Streamlined workflow dynamically "anticipates" your next step
