

# Tank Cleaning & Fuel Restoration

## Key features and benefits

- Patented design for fuel with engineered safety systems onboard
- Eliminate problems with blocked filters
- Eliminate costly insurance claims from vehicles breaking down
- Improve the functionality of pumps and ATGs
- Kill and remove microbial growth
- Remediate and re-sell degraded fuel stock

## Problems with water and dirty fuel in your storage tank?

**Modern fuel formulations can have a devastating impact on the health of tank systems and product quality. Petromonitor provides the most comprehensive solution for removing contamination and free water as well as a patented process for restoring fuel quality and remediating phase separation.**

Unlike other fuel tank cleaning services, our market-leading technology sweeps the entire tank floor to remove free phase water from the tank, and only liquid waste (not fuel) is removed from site.

"The most comprehensive service to solve problems such as phase separation, microbial contamination, and degraded diesel."

## Tank Cleaning & Fuel Restoration

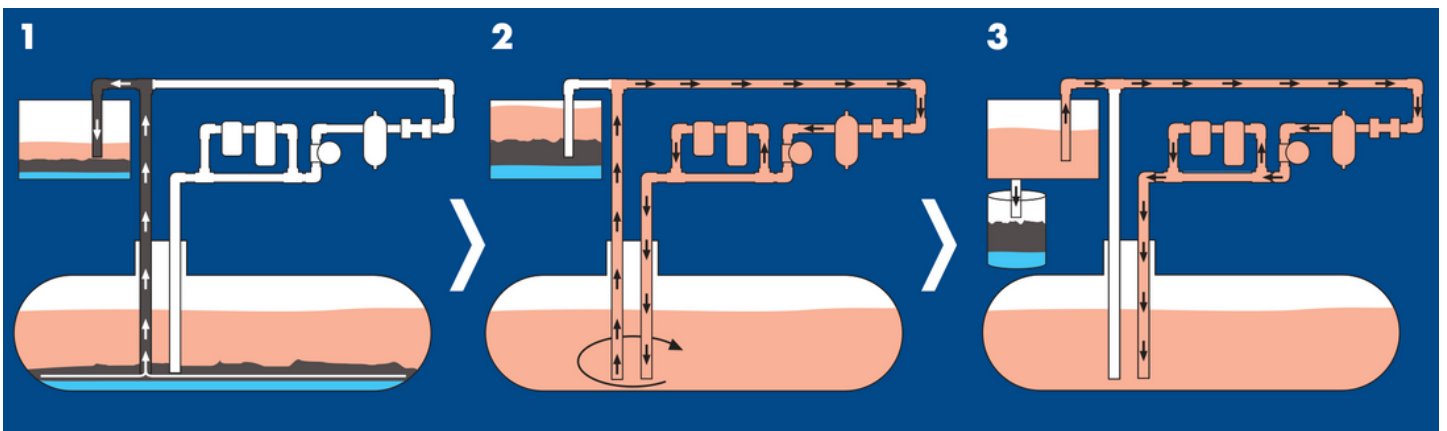

ULP before and after

Diesel before and after

## How it works

1. Removal of water and contaminants such as rust particulate, bacterial sludge and foreign matter using equipment traversing the entire tank floor from multiple access points and pumping into a holding tank to settle.
2. Filtration, conditioning and polishing of fuel to a filtration rate of 5 micron.
3. Remaining fuel in the settlement tank is filtered and returned to the storage tank and waste disposed of in accordance with local regulations.
