

Wetstock Monitoring

Realtime features

Multiple leak detection methods:

- Sudden loss alarms
- Short term analysis
- Quiet time assessment
- SIR results

Equipment performance reporting:

- Meter drift analysis
- Dispenser performance
- ATG accuracy
- Real water alarms
- Tank gauge calibration

Inventory management tools:

- Delivery verification
- Inventory visibility
- Cross-delivery contamination

Wetstock Live: The smartest wetstock intelligence

Petromonitor has exclusive access to Leighton O'Brien's *Wetstock Live* solution that builds on their existing wetstock management expertise based on 56,000 analysis on more than 20,000 underground fuel storage tanks per month.

Wetstock Live provides real-time, accurate and actionable network-level information on a singular management software platform to optimise maintenance and environmental compliance for all brands of equipment.

Proprietary analytics identifies fuel leakage faster and more accurately via unique smart alarms including sudden loss, short term analysis and quiet time assessment which identifies fuel loss during non-sales hours.

Traditional **statistical** inventory reconciliation (SIR/SIRA)

Wetstock **Daily**

Petromonitor's Wetstock Daily monitoring service is a popular package that screens all fuel tank systems for losses daily, providing full weekly analysis and monthly compliance reporting.

The depth and accuracy of our analysis means we can identify the root cause of fuel variances, ensuring your sites remain compliant while minimising the cost of fuel losses.

Using statistical trend analysis, we apply more than 80 algorithms over daily inventory, sales and delivery data to provide a certified monthly compliance result including a PASS, FAIL or INCONCLUSIVE.

We are certified to process accurate results with only 26 days of data, which sets the industry standard for leak detection and fuel loss monitoring. In fact, networks using our software have reduced their fuel losses by between 10% – 32%.

Wetstock Daily is more than just compliance... It's a way to identify and reduce fuel losses, better manage equipment maintenance and increase profitability.

Wetstock **Monthly**

Petromonitor's Wetstock Monthly monitoring service is tailored for commercial or home-base clients who require a compliant system that operates over and above their normal wetstock processes.

Once a month the entire network is analysed to ensure that all systems are experiencing normal fuel trends. Any systems that have high losses are flagged, diagnosed and highlighted in comprehensive reporting platforms.

Wetstock Monitoring

Key features and benefits

- Minimize environmental risks through centralised, ongoing fuel loss monitoring and leak detection
- Simple compliance reporting providing accurate SIR results
- Tank gauge calibration in software to detect real losses
- Unmatched analytics and intelligence applying more than 80 algorithms
- Frequent analysis periods tailored to your budget and risk profile
