

Wetstock Monitoring

Wetstock Live: The smartest wetstock intelligence

Real-time features

- Leak detection
- Dispenser performance
- Meter drift analysis
- Water management
- ATG monitoring
- Delivery validation
- Hose to tank mapping

PetroMonitor Africa has exclusive access to Leighton O'Brien's *Wetstock Live* solution that builds on their existing wetstock management expertise based on 56,000 analysis on more than 20,000 underground storage tanks per month.

Wetstock Live provides real-time, accurate and actionable network level wetstock information on one platform for all brands of equipment. It unifies all elements of wetstock onto one elegant software platform.

Fuel retail network operators benefit from optimised maintenance and leak detection outcomes and enhanced retail operations. Highly configurable and scalable from global to local, *Wetstock Live* has unlimited logins and is available in any language.

We provide **real time** daily, weekly and monthly monitoring services

Wetstock Monitoring

Key features & benefits

Reduce losses & boost profits by:

- Highlighting short deliveries
- Identifying over dispensing pumps
- Flagging theft concerns

Identify operational issues:

- Mis-calibrated ATGs
- Forecourt mapping errors
- Staff administration issues
- Forecourt controller issues

Achieve cost reduction by:

- Reducing false "FAILS"
- Fewer leaks undetected
- Avoiding costs of larger leaks
- Security from environmental and damage claims
- Minimize risk of costly cleanup

Traditional wetstock monitoring

Daily Weekly Monthly Service (DWM)

A popular service package is Daily Weekly Monthly (DWM) monitoring, whereby we screen all systems for losses daily, providing deeper examination of any loss concerns detected, weekly analysis and monthly compliance reporting. This means your premises remain compliant while minimising the cost of fuel losses.

The daily service has proven to be a valued means of managing risk as any abnormal losses are detected quickly.

Our analysis includes:

- Daily real time screening of all tanks to detect abnormal losses via our "screamer trap"
- Instant notification of abnormal losses
- Analyst examination of fails detected
- Recommendations made
- Weekly and monthly analysis of all systems

A comprehensive range of user-friendly reports are available.

Monthly Wetstock Management

The real time monthly wetstock monitoring service is for clients who require an EPA-compliant system that operates over and above their normal processes. Once a month the entire network is analysed to ensure that all systems are experiencing normal fuel trends. Any systems that have high losses are flagged, diagnosed and highlighted.

The monthly service includes analysis and data acquisition of wetstock and comprehensive reporting.
