

SafeSpeed® - Advanced Intelligent Speed Assist (ISA)

It is common knowledge that driving at posted speed limits helps increase safety and mitigate risk. Speeding is a habitual behavior rather than a conscious decision, and continues to be one of the biggest challenges facing fleets.

SafeSpeed® is the unrivaled solution that helps backstop exposure to excessive speeding resulting in fewer crashes, injuries, and fatalities by lowering operating risk. The solution works on all classes of motor vehicles and can be easily retrofitted.

SafeSpeed manages speed to help save lives and protect vulnerable road users by impeding travel above the fleet's enforced thresholds in compliance with their policies:

- » Maximum top speed
- » Posted speed limit
- » Speed thresholds for urban environments
- » Speed thresholds for highway environments
- » Custom speed zones

SafeSpeed advanced ISA provides advanced proprietary technology to automatically manage vehicle speeds according to posted speed limits in real time.

This pre-emptive intelligent speed assist solution comprises MAGTEC's proven vehicle control technology using market-leading speed limit data by SpeedGauge®. SafeSpeed cannot be overridden but if driving circumstances warrant, a momentary provision is available.

SafeSpeed is an effective tool to help curb the habitual behavioral pattern of speeding.

Using SafeSpeed advanced ISA to mitigate excessive speeding on all roads pro-actively:

- » Increases road and public safety
- » Improves CSA scores by reducing speeding violations
- » Provides drivers added time and space to react
- » Prevents serious crashes, injuries, and fatalities
- » Lowers Workers Comp. costs for driver injuries
- » Limits speed re: medical events pedal misapplications
- » Lowers legal and claim costs
- » Improves driver safety and retention
- » Justifies improved flexibility with insurance premiums
- » Improves fuel efficiency
- » Reduces carbon footprint
- » Lowers maintenance costs (brakes, tires, collisions)
- » Reduces resources required to analyze speeding data

Security Features

Maintain control of fleet vehicles 24/7 anywhere:

Access Control (optional):

- » Disables vehicle until authorized driver authenticates

Driver Panic Button (optional):

- » Enables driver to covertly send emergency notification to company of a serious incident
- » Helps mitigate adverse outcomes
- » Helps heighten driver/passenger safety

Remote Vehicle Disabling (standard):

- » Safely disables a moving vehicle during hijacking, driver impairment or erratic driving events
