

BIOFIELD TUNING

CAUTIONS & GUIDANCE

We encourage approaching this non-invasive, powerful method with curiosity and discernment. The following information is provided so that you can make the best decision for your well-being.

Please note, we have not done extensive studies or organized research on these circumstances. This information is based on anecdotal experiences acquired through many sessions with Eileen McKusick and our Certified Biofield Tuning Practitioners.

Given this, consider limiting your use of tuning forks initially as a precautionary measure until you gain a sense of how your body responds.

By sharing this information, BioSona, LLC does not accept responsibility for any possible outcomes.

Active Cancer*

- Once cancer has advanced in the body, detox pathways are often compromised, and the body may have difficulty digesting newly introduced energetic input
- The body may not have the resources to effectively manage detox symptoms that may result from Biofield Tuning
- We have observed tumors may be irritated by tuning and as such, we suggest not applying forks directly on them

**These statements refer to cancer that is active and/or in treatment; not to cancer that is in remission*

End of Life

- Biofield Tuning may overwhelm end-of-life body systems which are often in a depleted energetic state
- End-of-life detox may be uncomfortable as the body may not have the resources to effectively manage detox symptoms
- Components of Biofield Tuning have been used as a means of calming the nervous system during end-of-life circumstances to ease transition

Acute Illness

- If your potential client is experiencing any kind of acute or advanced illness, Biofield Tuning can create uncomfortable detox or aggravate symptoms.
- Treatment often requires a multi-modal approach

Pregnancy

- During pregnancy, the body expends a tremendous amount of energy; Biofield Tuning may overwhelm this already overextended system
- The body may not have the resources to effectively manage detox systems which may affect both mother and baby
- Components of Biofield Tuning, such as using weighted forks on the body for limited duration, have been used to promote relaxation during pregnancy

Electrical Medical Implants*

- Tuning forks may interfere with the electrical functioning of these devices due to the added vibrational input
- No reports of ill effects have been associated with newer pacemakers. Proceed with caution, careful observation, and the advice of your medical professional

* *Pacemaker, Medtronic pumps, neural implants*

Recent Concussions

- When the brain is swollen, it takes time for inflammation to resolve.
- We suggest waiting at least 3 months after a significant injury for the brain to heal before receiving Biofield Tuning on or around the head. The rest of the body can receive gentle tuning shortly after injury occurs
- Each case is different – with mild concussions, components of Biofield Tuning may be used before the 3-month waiting period

Controlled Seizures

- Seizures may be triggered when past seizure activity is located in the field. Prepare yourself and your client for the possibility of this occurrence. Always remember to work within your comfort zone.
- For distance sessions suggest that that client has someone nearby and available to support as needed.

Morbid Obesity

- Suppressed emotions and energy can be held in adipose tissue. If there is extensive adipose tissue, Biofield Tuning may result in unpredictable and strong emotional releases and/or uncomfortable detox responses
- Individuals may be more comfortable receiving Biofield Tuning while seated versus on a treatment table

Metal Toxicity

- A Biofield Tuning session may initiate a large release of toxins from cells, resulting in discomfort
- Some individuals with heavy metal toxicity have experienced a strong detox response following a Biofield Tuning session
- Consider seeking guidance from additional modalities, such as supplements, that may support the detoxification process

CONSIDERATIONS

USING WEIGHTED FORKS ON THE BODY

Varicose Veins

- Avoid using firm pressure with weighted forks directly over large varicose veins. This has the potential to dislodge blood clots
- Consider working gently with mild pressure in the area around varicose veins rather than directly on them
- No reports of ill effects have been associated with using gentle pressure on and around spider veins

Broken Bones

- Avoid working with weighted forks directly on any recent broken or fractured bones, as the vibrational input can be uncomfortable and interfere with the natural healing process

Dental Anomalies

- Avoid using direct pressure with weighted forks over dental implants, chipped/broken teeth, or bone fragments in the gums, as this may cause them to shift due to the vibration of the tuning fork

Metal Implants*

- Direct pressure with weighted forks on these areas may cause discomfort
- In these circumstances, consider gentle use of the tuning forks until you gain a sense of how your body responds

**Metal rods, screws, plates*

CONSIDERATIONS

MEDICATIONS & MENTAL HEALTH

- Medications in general can alter the electro- magnetic signals of the body and extend the process of returning to an organic, healthy blueprint. You may notice the forks broadcast more tones that are muffled, fuzzy, or dampened in some cases.
- Field adjustments can affect the way the body processes medications, so consider encouraging clients to work with their prescribing provider to monitor their medication needs.
- Psychotropics and other drugs that affect brain chemistry, progress can be slower and limited.
- It can be helpful to work as part of a team of support for severe or long-term depression, and other psychological issues such as addiction.

CONSIDERATIONS

WITH BT GROUP AUDIO SESSIONS

- In the five years that Group Audio Sessions have been conducted, thousands of people have received them and very few adverse reactions have been reported.
- If you are interested in experiencing a Biofield Tuning Audio Session, we recommend paying close attention to how your body is feeling while listening. In all cases, we recommend trusting your own senses and choosing sessions accordingly.
- Consider our free audio session, “Overcoming Overwhelm,” which is a gentle introduction to this modality. The focus of this audio session is to remain centered and calm in situations that may be overwhelming.
